

# QA Testing for Continuous Integration & Delivery

*Rainforest provides a testing solution that can keep pace with the demands on continuous integration and continuous delivery, unlocking the potential of fast-moving teams.*

Rainforest is designed to work with the tools and processes your team already uses. Companies use Rainforest to get the speed of automation and the benefits of manual QA testing earlier in the development process. Developers can also use Rainforest DevX to write and run tests from a command line, without ever leaving their workflow.

## Accelerates QA for Faster Development Cycles

Access to on-demand testers provides scalable QA execution that doesn't take your team away from development to run repetitive tests.

- Test instantly across web and mobile VMs for comprehensive feedback in 30 minutes
- 60,000 experienced testers

---

## Integrates Testing into Your Workflow

The Rainforest CLI and DevX bring test case management, execution and results into the tools your team uses for faster feedback loops and clear, actionable bug reports.

- Write and edit tests from code editor
- Initiate test runs automatically from CI
- Get results where they're most useful -- whether that's your dev team's Slack channel or a bug tracking tool

---

## Improves Testing Automation Results

Rainforest is the perfect execution alternative to brittle, flaky automated tests, freeing up your QA engineers to spend less time managing automation scripts and more time improving product quality.

- Machine learning-verified results with human context for more confident deployments

## Using Rainforest in CI Workflows

Rainforest is designed to work with the tools and processes your team already uses. Companies use Rainforest to get the speed of automation and the benefits of manual QA testing earlier in the development process. Developers can also use Rainforest DevX to write and run tests from a command line, without ever leaving their workflow.

“We haven’t had to put in a lot of resources on our end to supplementing our existing team. Every time our developers want to push something it goes to our staging environment. Rainforest results are imported to Slack, and we get results in as little as 15 minutes.”

Dominic Esposito  
Head of Product, Jitjatjo

## Integrations

In addition to the out-of-the-box integrations supported by Rainforest, our full-featured API can be used to configure Rainforest to fit with your team’s unique workflow.

Jenkins

## About Rainforest QA

Rainforest QA helps agile and continuous delivery engineering teams move faster with the industry’s only AI-powered crowdtesting platform. Our platform leverages 60,000 qualified testers to deliver on-demand, comprehensive and machine learning-verified regression test results. Rainforest customers spend less time and money testing so they can ship better applications faster. For more information on Rainforest, visit <https://www.rainforestqa.com>.
