

Rainforest QA Virtual Credit Cards

Credit cards are used in the majority of online transactions. However, testing credit card functionality is time-consuming and labor-intensive, and remains nearly impossible for teams to automate. Without a reliable credit card testing solution that keeps pace with development needs, teams risk shipping bugs that lead to failed payments and ultimately loss of revenue.

How Rainforest Virtual Credit Cards Work

Rainforest QA generates virtual credit cards linked to real, dedicated accounts from which the credit balance is drawn, replicating the real credit card user's experience. This allows Rainforest customers to test their entire transaction flow, from point of sale to payment completion, quickly and securely.

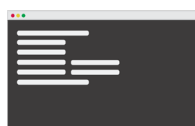

Fast, Reliable Transaction Testing with Rainforest QA

Gain Confidence in Your Customers' Experience

Don't let bugs cause checkout abandonment — gain insight into UX quality.

Integrate Credit Card Testing into Development

Test credit card transactions in staging or production and receive feedback in minutes.

Eliminate Credit Card Management Headaches

The accuracy of real credit card transactions, without the management overhead.
